

WE HAVE EXCITING OPPORTUNITIES, ENORMOUS CHALLENGES,
AND ENDLESS WORK AHEAD OF US.

Environmental Policy

Our Commitment

Vinga's environmental work aims to minimise all negative effects from our operations. Our environmental policy shall be applied throughout the supply and value chain of our operations. Everything we do affects the nature around us and everyone who lives in it. We are convinced that it is possible to do what we do today but in a much better way. We have exciting opportunities, enormous challenges, and endless work ahead of us.

We are working to minimise emissions from all types of transport our business requires, such as air, sea, and truck. Wherever possible, the transportation that generates the least emissions will be chosen. We co-load wherever possible and containers and cartons should always be filled. We do not transport air. We vacuum pack as much as possible. We work with foresight, efficient production planning and assortment developing to be able to choose the transportation that contributes to the least environmental impact.

Electricity and energy consumption shall be minimised, and we shall use and develop renewable energy and electricity where possible and applicable.

In the production of goods, the choice of raw materials shall always be analysed and assessed to be selected based on minimum environmental impact.

We shall always have the right information and knowledge about the content of our products, and we shall work continuously and proactively to ensure the applicable legislation.

We also strive to phase out and exclude products containing particularly hazardous substances at an early stage.

We work proactively to seek out and apply alternative materials or components that create less impact on the environment, not because we must, but because we want to. A product should be developed with the aim of being durable, providing its owner with the greatest possible functionality and being easily reused or recycled when it enters that stage of life.

We strive to reduce the amount of waste and sort waste as much as possible that can be reused or recycled.

We work on continuous improvement to reduce our environmental impact through knowledge forums and through measurement and evaluation of existing and future activities and products.

We continuously monitor current legislation in all areas.

PVC policy

it is Vinga's policy not to use PVC in any products. The exception is electronics where PVC is used to ensure flame retardancy.

Policy PFAS

Vinga does not deal with fluorine-based coatings and formulations (e.g., in frying pans and as water- and dirt-repellent formulations on textiles).

Collaborations

We have guided procedures and processes for starting a new collaboration, with a strong emphasis on the commitment to sustainability issues of the other party. Partners' commitment to sustainability issues is regularly assessed in the Vinga Supplier Assessment. The aim is to reward those partners who are committed to sustainability issues and demonstrate progress in this area.

Travel Policy

Vinga has a total ban on domestic flights - except for sales representatives who are covering Norrland, Sweden. We travel by public transportation unless this involves significant extension or complication to carry out the assignment. For example, for training or meetings in Gothenburg or Stockholm. For conference trips from spring 2020 onwards, the rule is that we must choose a destination that can be reached in a reasonable time by train, bus, electric car, or boat.
